

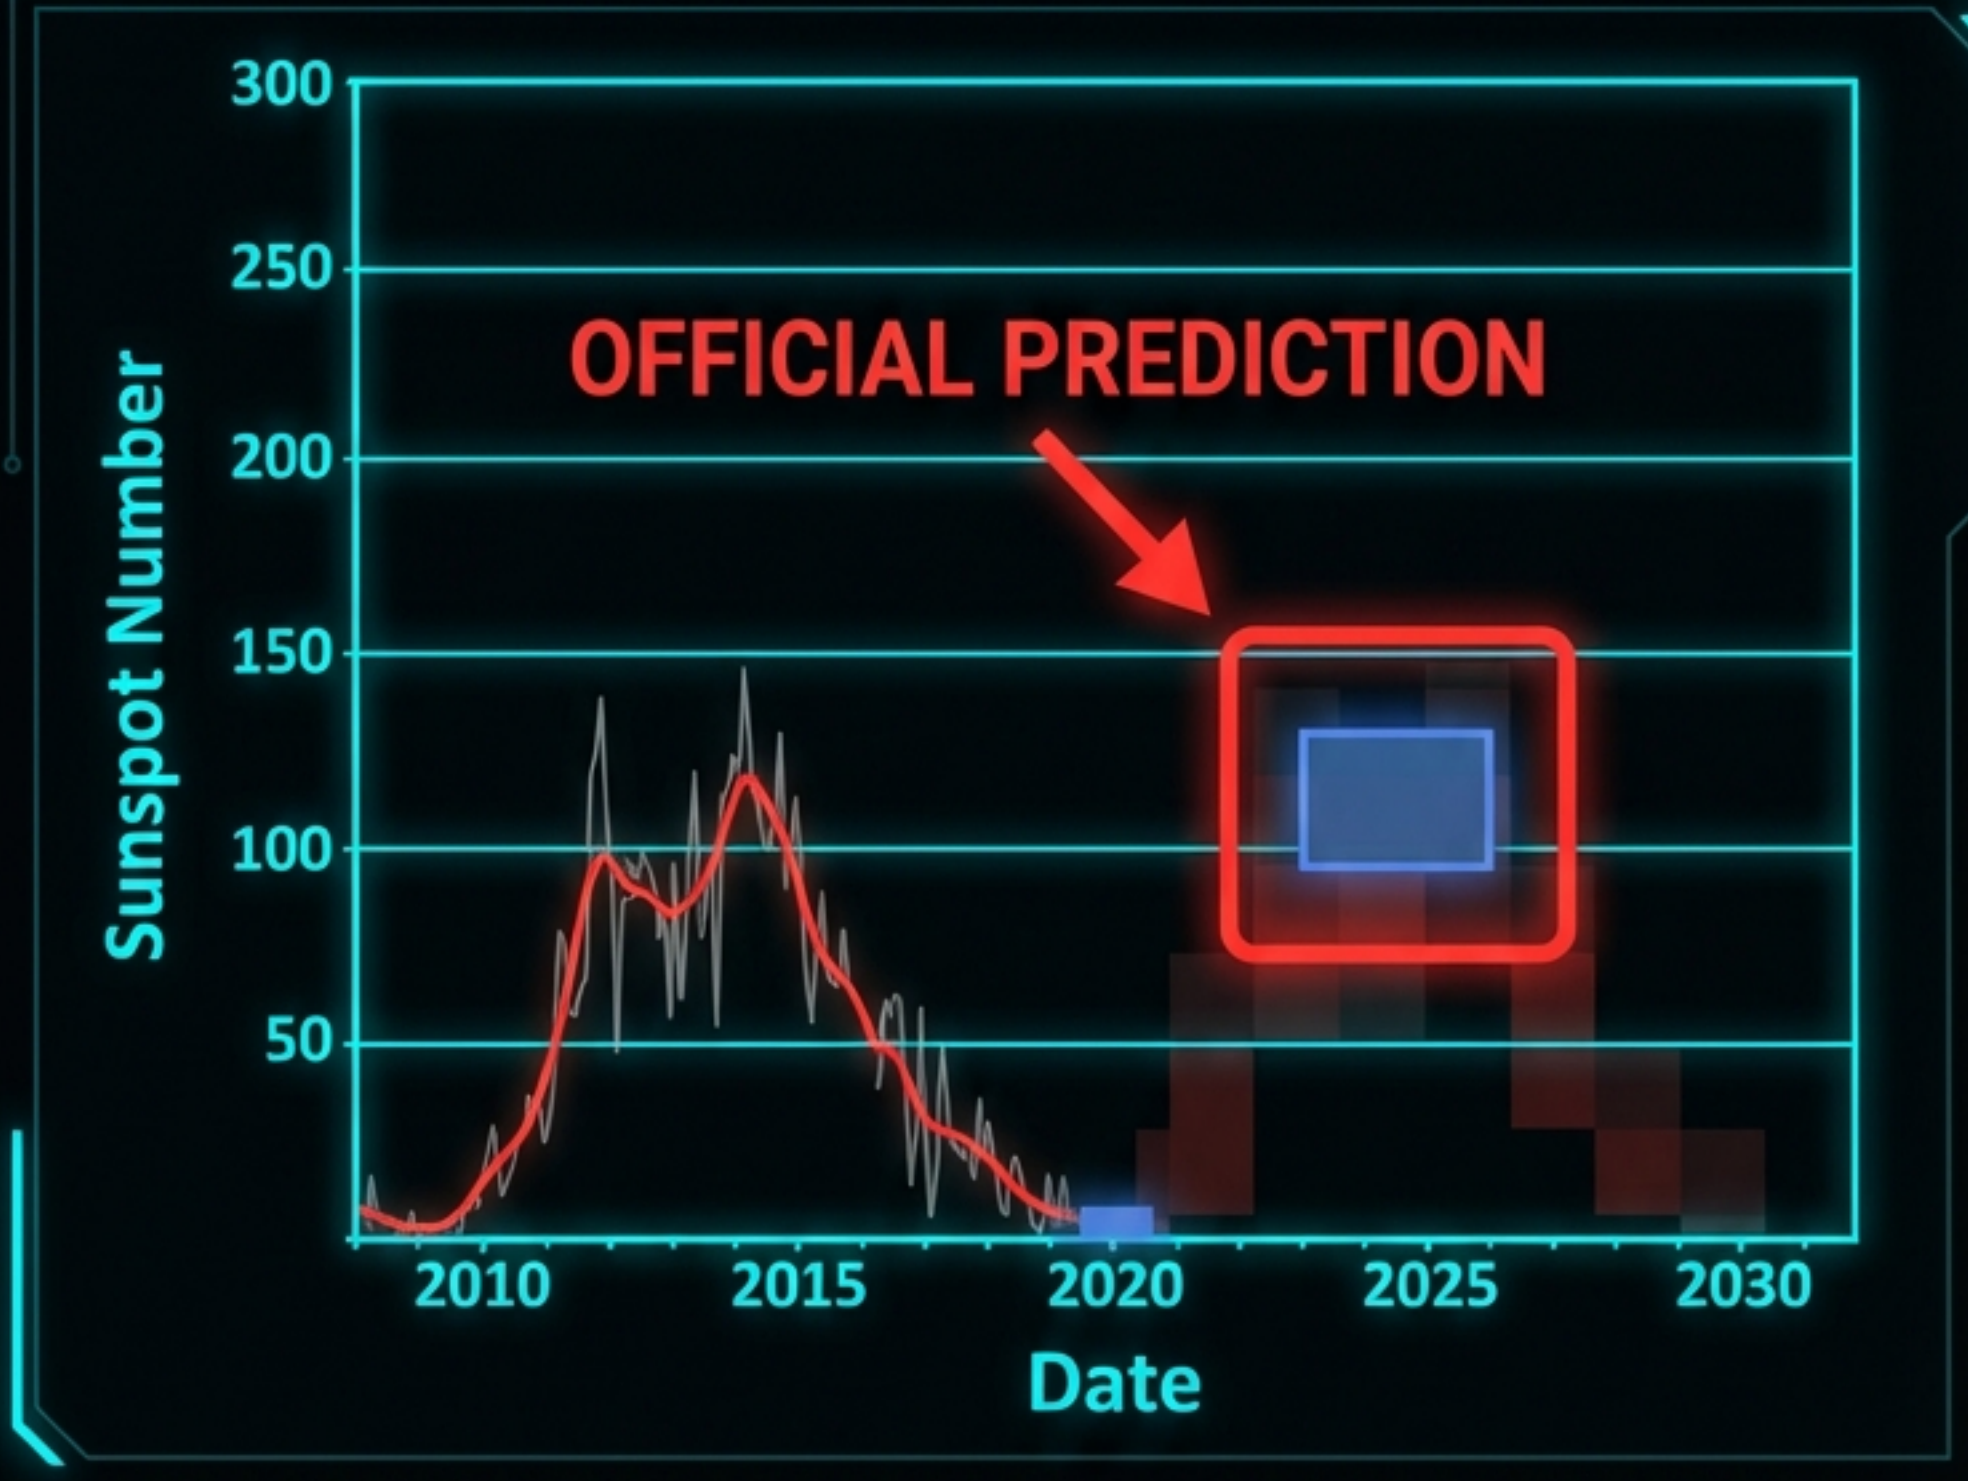
# THE SOLAR CYCLE SOLVED

## February 20, 2026: The Saturn-Neptune Conjunction

For 300 years, gravity was the only tool. It failed. Today marks the victory of the Unified Field—combining Gravity and Electromagnetism to unlock the mechanics of our solar system.

NotebookLM

# THE MAINSTREAM BLIND SPOT



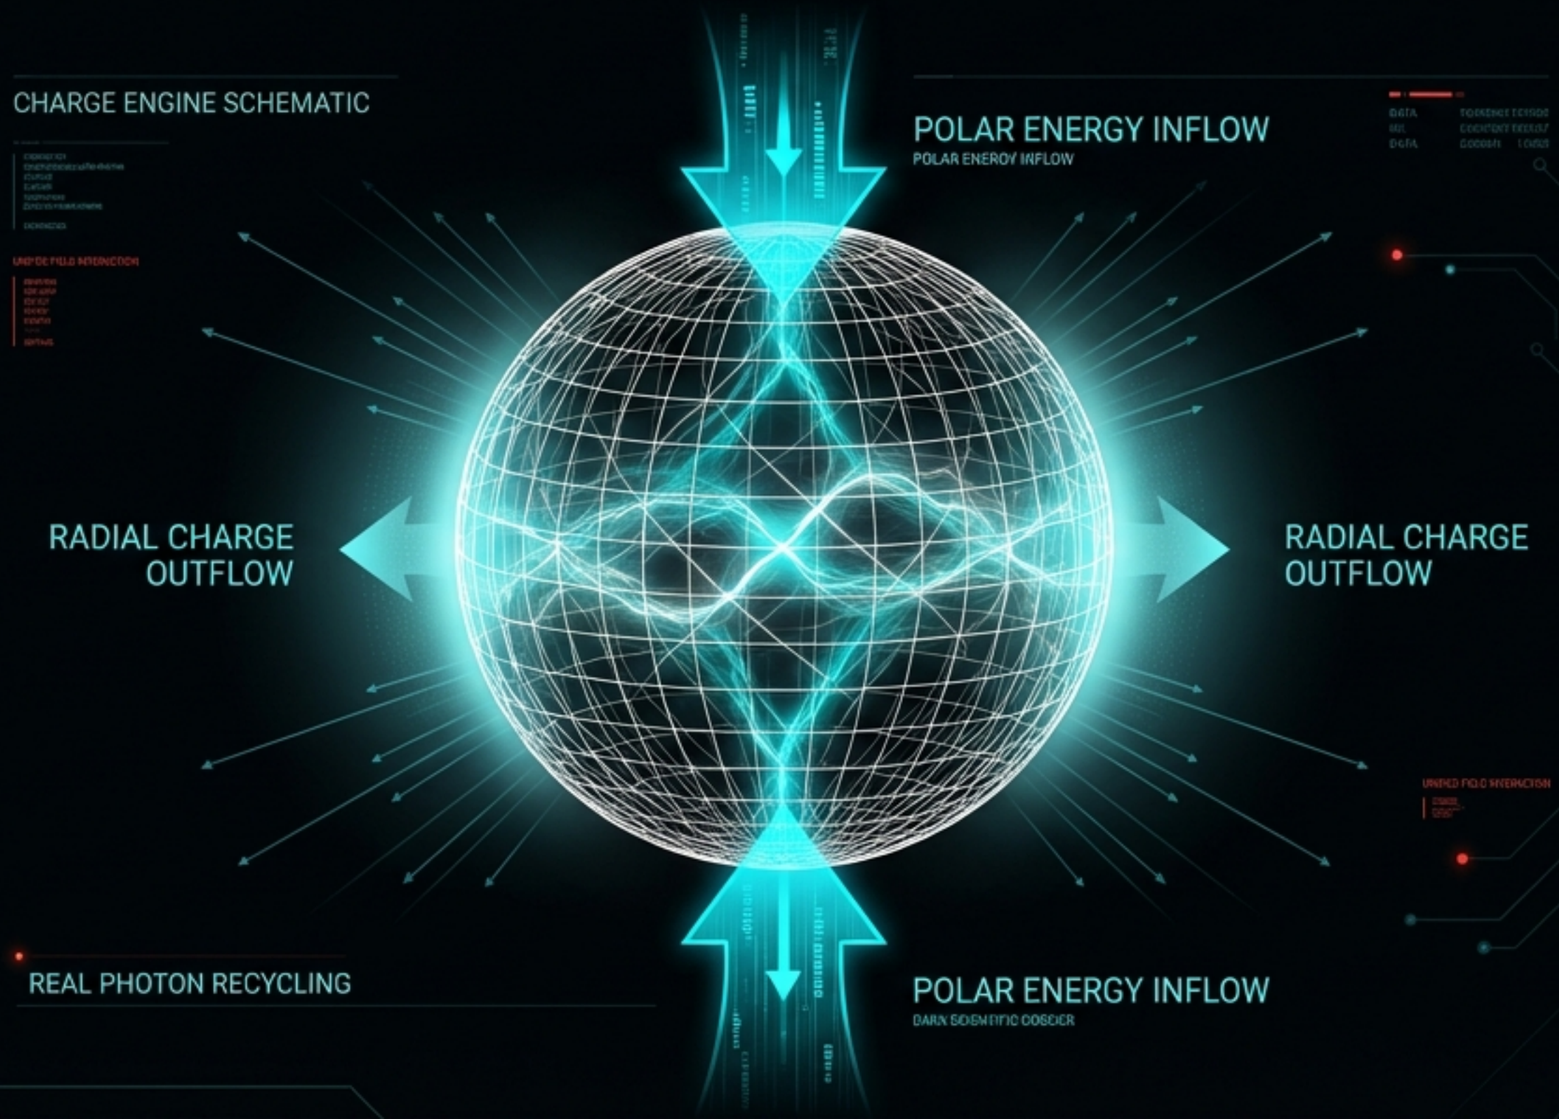
Conventional science believes solar cycles are caused by internal convection. This model has a failure rate of nearly 100%.

NASA/NOAA prediction (2019): A 3-year margin of error with a 35-point leeway. They didn't really have a clue, so they went with the odds and guessed.

NotebookLM

# THE MISSING KEY: THE UNIFIED FIELD

Newton’s gravitational constant (G) has hidden the Electromagnetic (EM) field for centuries.



**KEY CONCEPT**

The Sun and Earth are not self-heating bodies. They are massive charge engines recycling real photons. The heat comes from charge rising from below, fed by the Sun.

NotebookLM

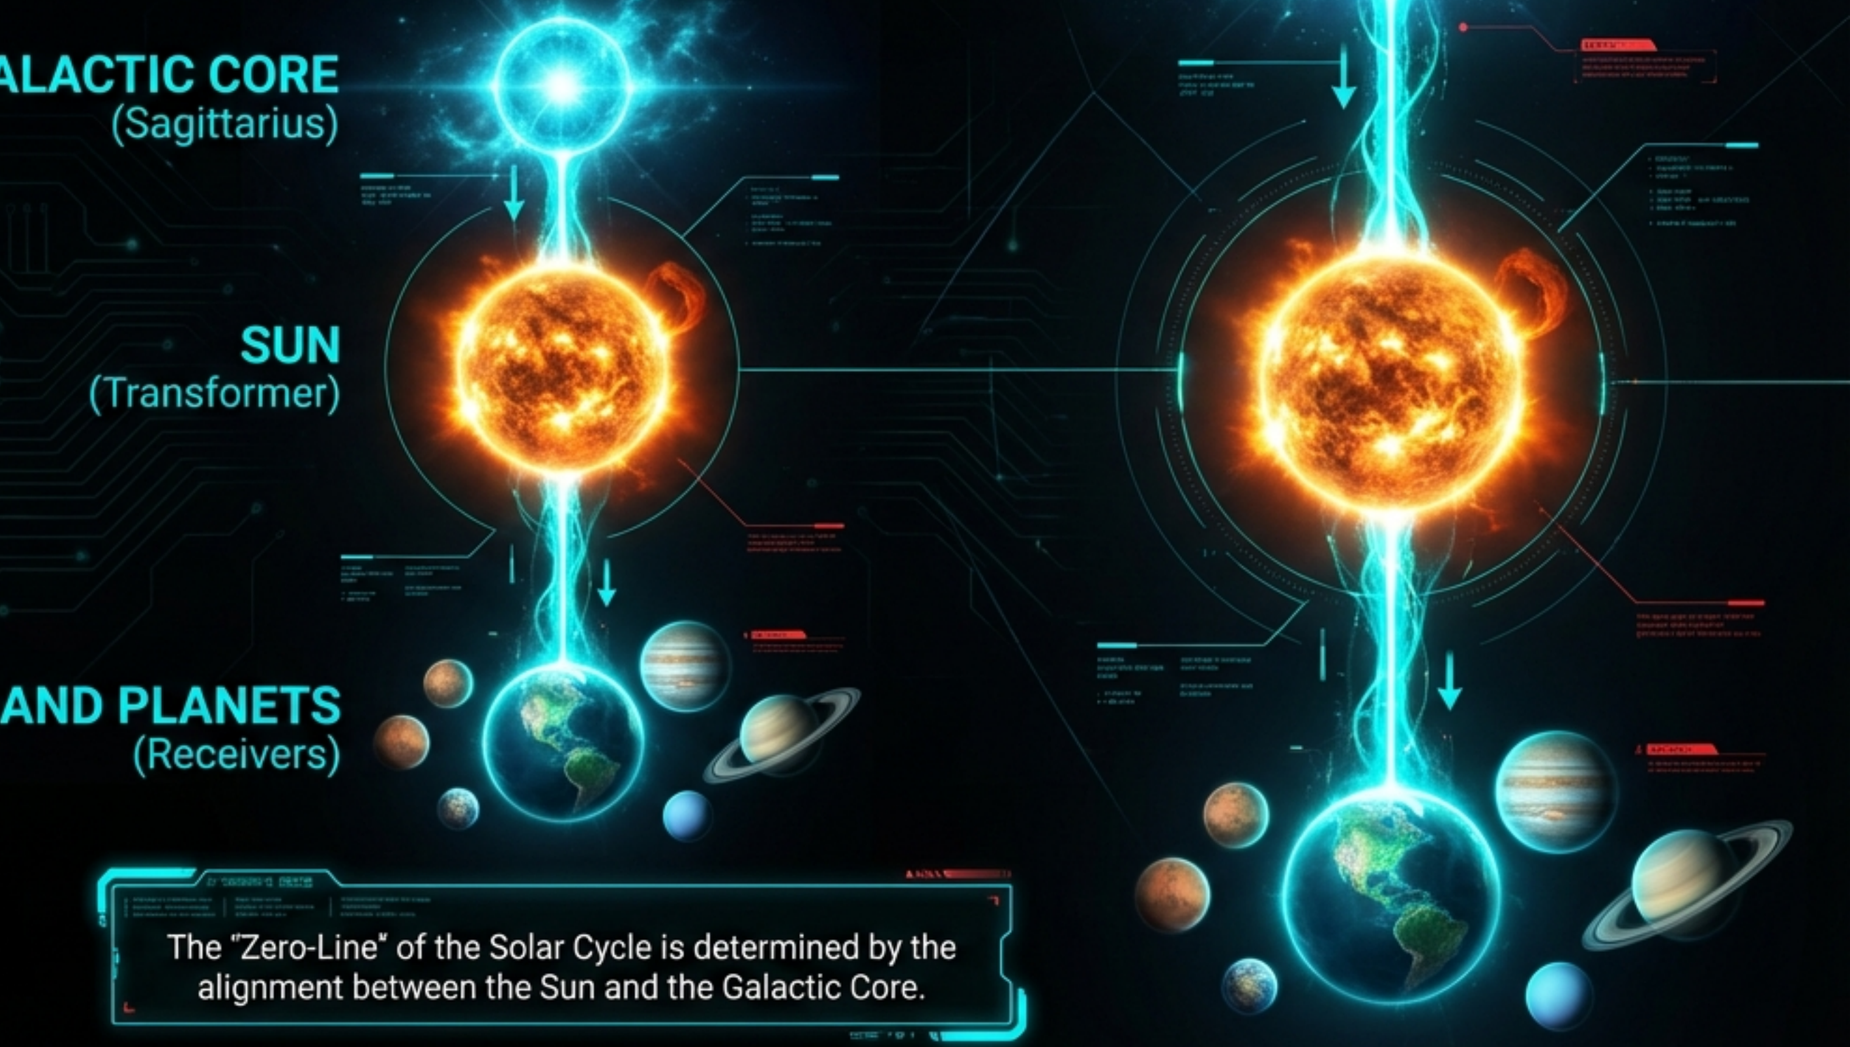
# THE GALACTIC UMBILICUS

The Sun is not a fusion generator acting alone; it is a transformer. It receives energy from the Galactic Core—a power plant equivalent to a trillion suns.

**GALACTIC CORE**
(Sagittarius)

**SUN**
(Transformer)

**EARTH AND PLANETS**
(Receivers)



The "Zero-Line" of the Solar Cycle is determined by the alignment between the Sun and the Galactic Core.

NotebookLM

# PLANETARY ALIGNMENTS ARE THE TRIGGER

Not astrology. Physics. Heavy lines of charge run between celestial bodies.

## MECHANISM

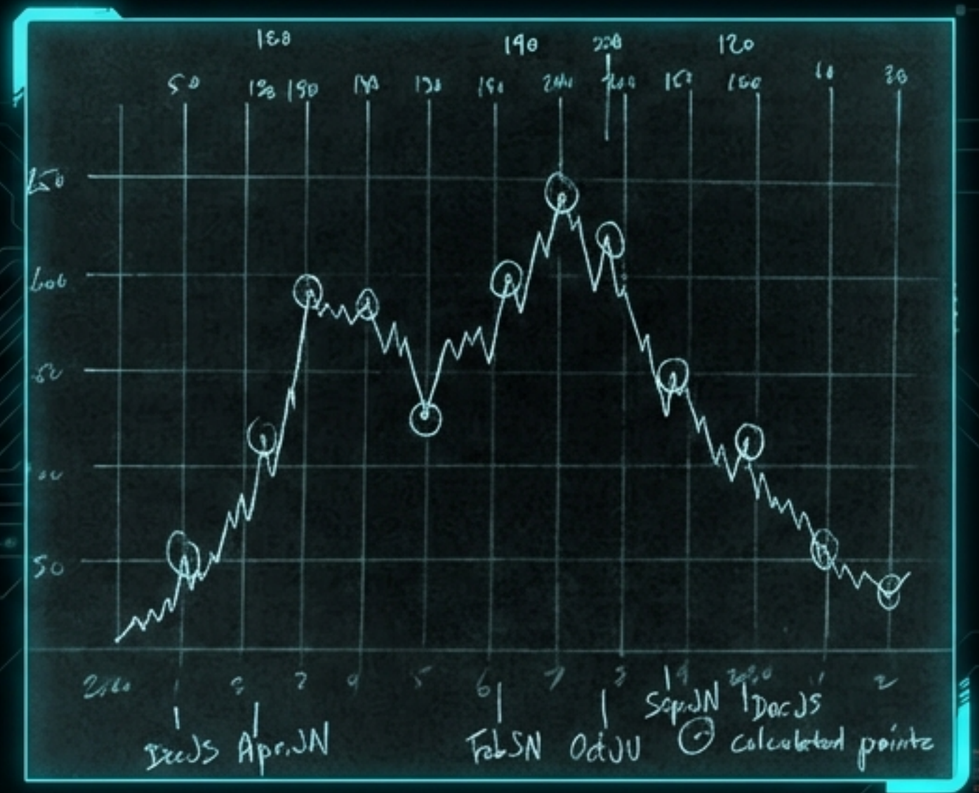
An EM feedback loop. The Gas Giants (Jupiter, Saturn, Neptune, Uranus) recycle charge and fire it back at the Sun. When they align, the circuit amplifies.

NotebookLM

# THE 2020 GAMBLE

Published six years ago. While the mainstream guessed at a decade-long curve, this chart predicted specific monthly spikes based on planetary conjunctions.

CHARGE ENGINE SCHEMATIC



> *"It was considered bold to the point of berserking... predicting monthlies six years in advance."*

NotebookLM

# WHEN COINCIDENCE BECAME PATTERN

**DEC 2020: Jupiter-Saturn Conjunction (Hit 1)**

**APR 2022: Second Major Spike (Hit 2)**

The cycle tracked the 'impossible' prediction, not the mainstream guess. Every major spike aligned with a planetary conjunction.

**2024: Jupiter-Uranus Conjunction (Hit 7)**

NotebookLM

# THE REACTION: PANIC

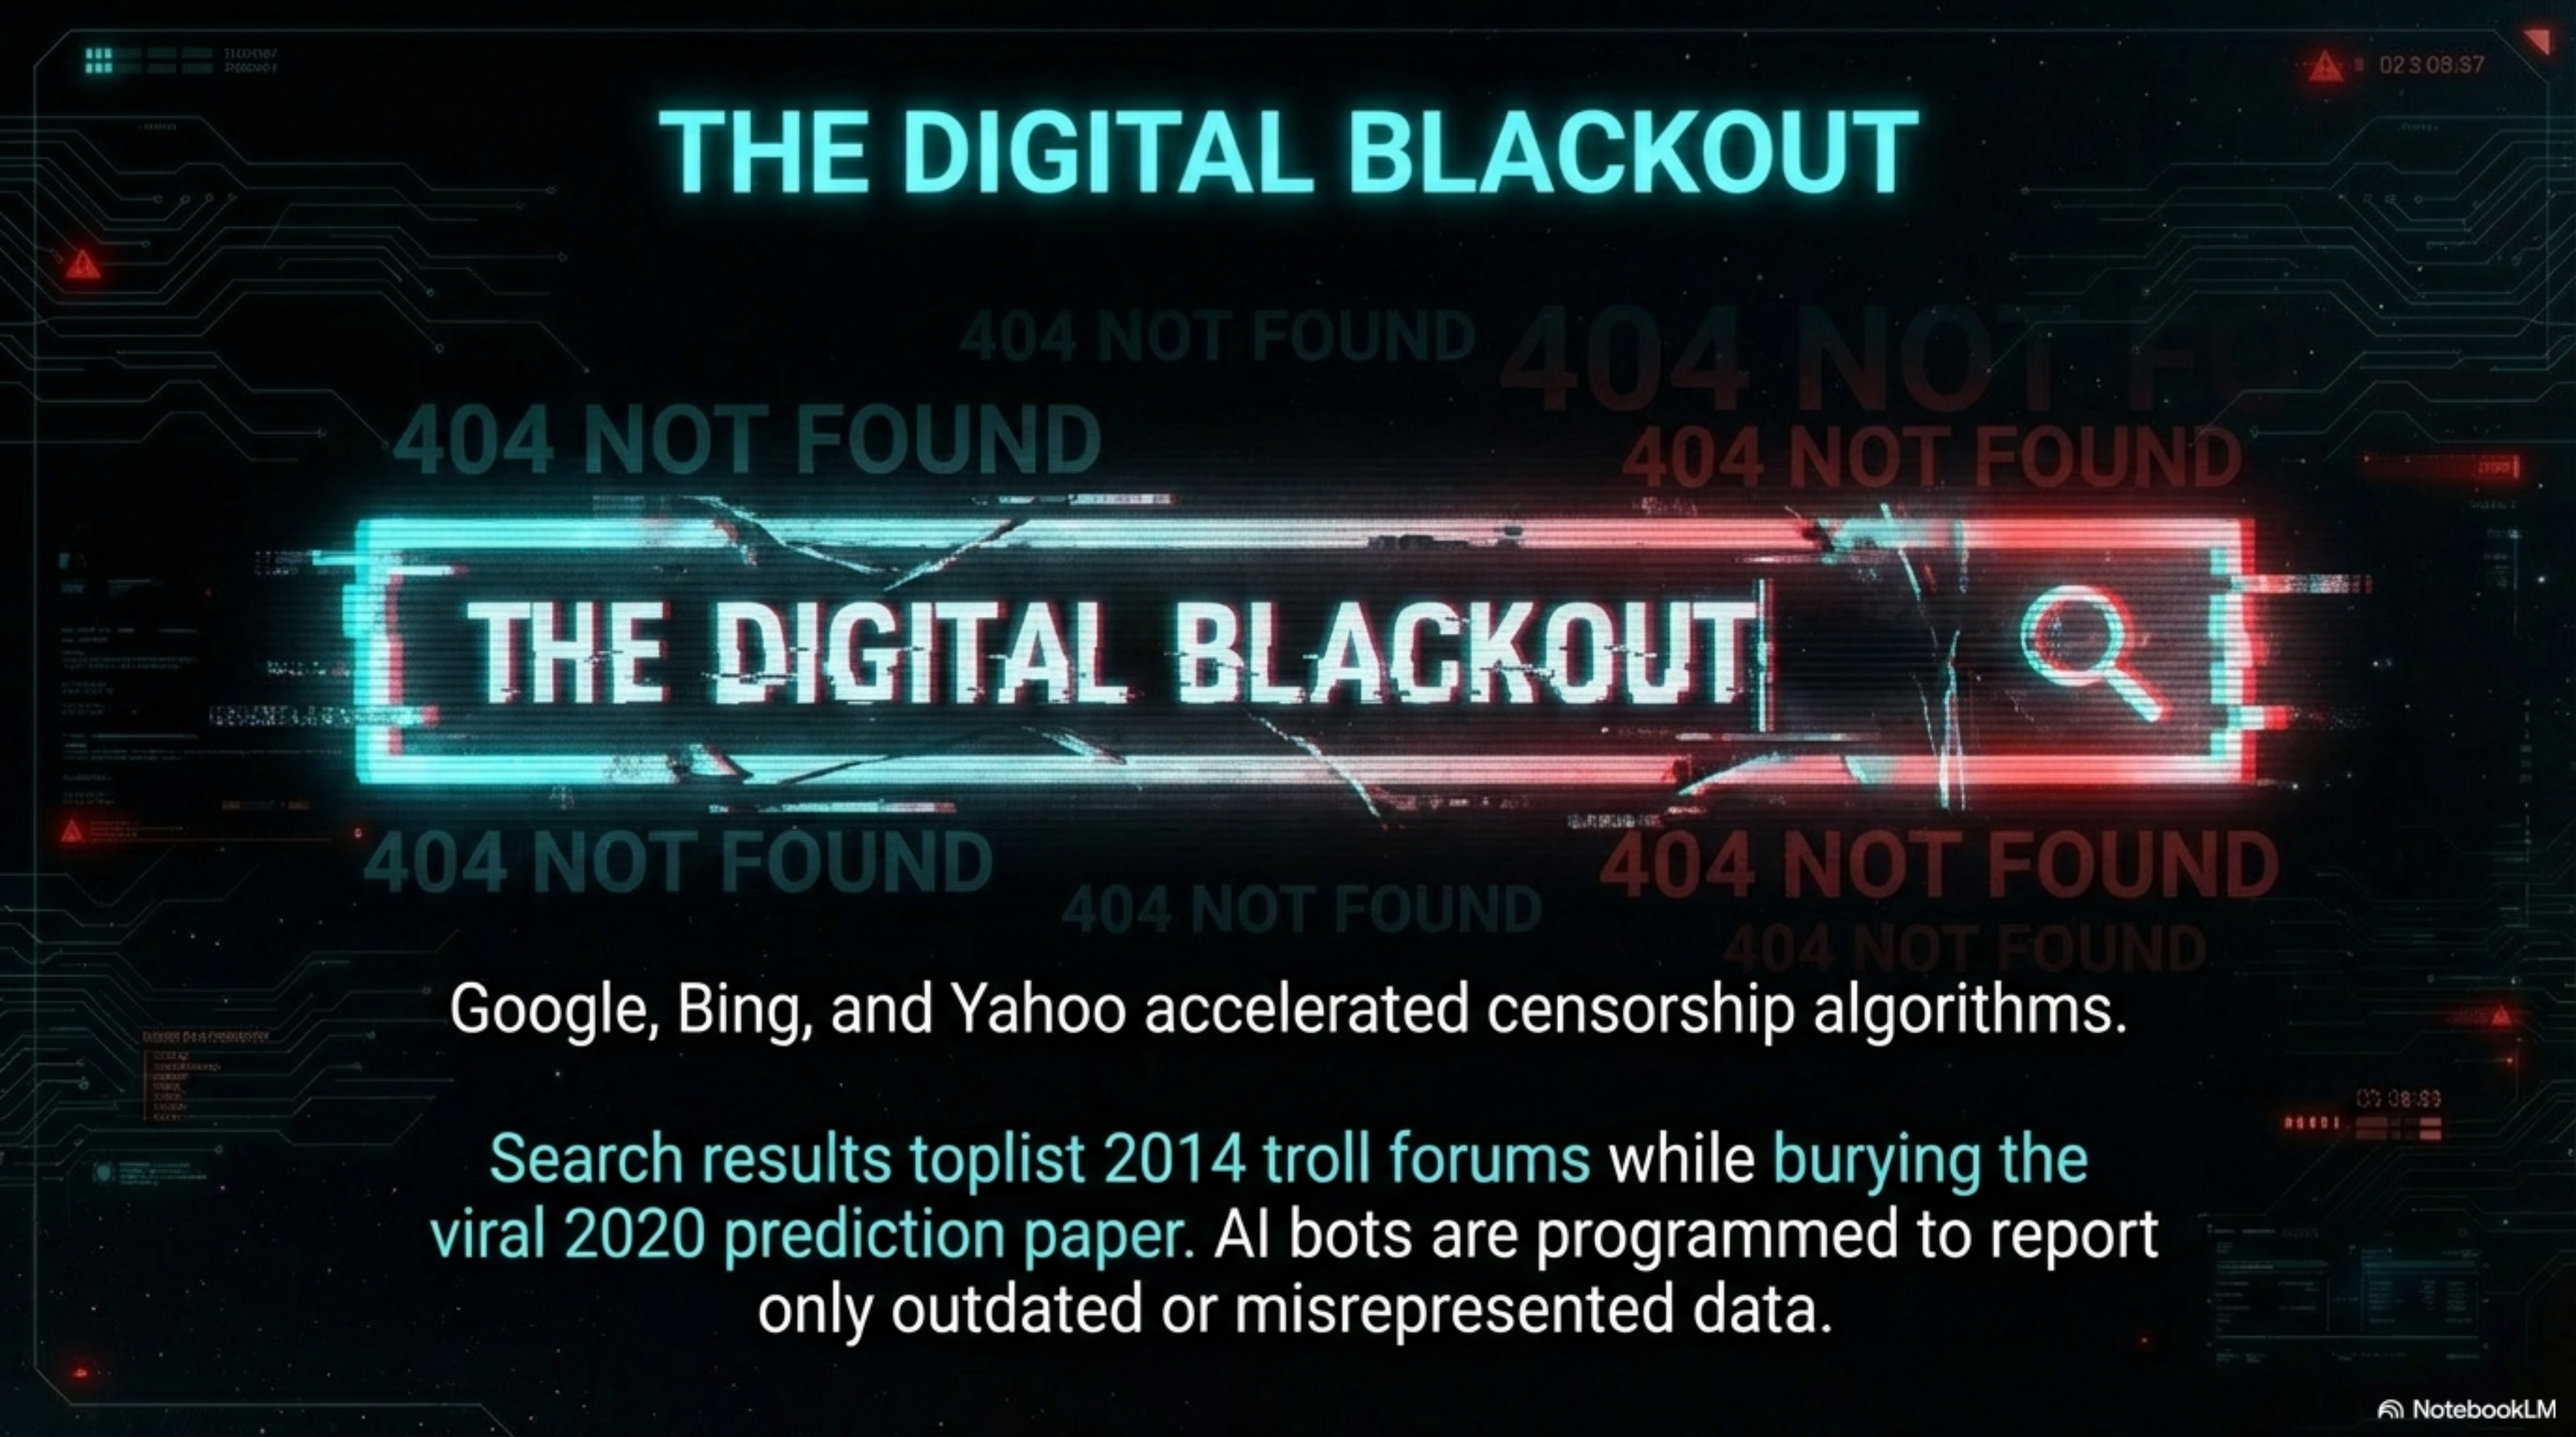
Following the 2022 confirmation, the Air Force took over sunspot reporting for the first time in history.

## Why involve the military if it's just weather?

**They were not there to observe.**
**They were there to bury the data.**

NotebookLM

# THE DIGITAL BLACKOUT



Google, Bing, and Yahoo accelerated censorship algorithms.

Search results toplist 2014 troll forums while burying the viral 2020 prediction paper. AI bots are programmed to report only outdated or misrepresented data.

NotebookLM

# FUDGING THE NUMBERS

To hide the spikes, the Air Force began erasing sunspots from the official count.

On the 12th, they reported 85 sunspots. The real number was 285.

Faking baseline data by over 200% to flatten the curve and deny the theory.

NotebookLM

# FEBRUARY 2026: THE FINAL TEST

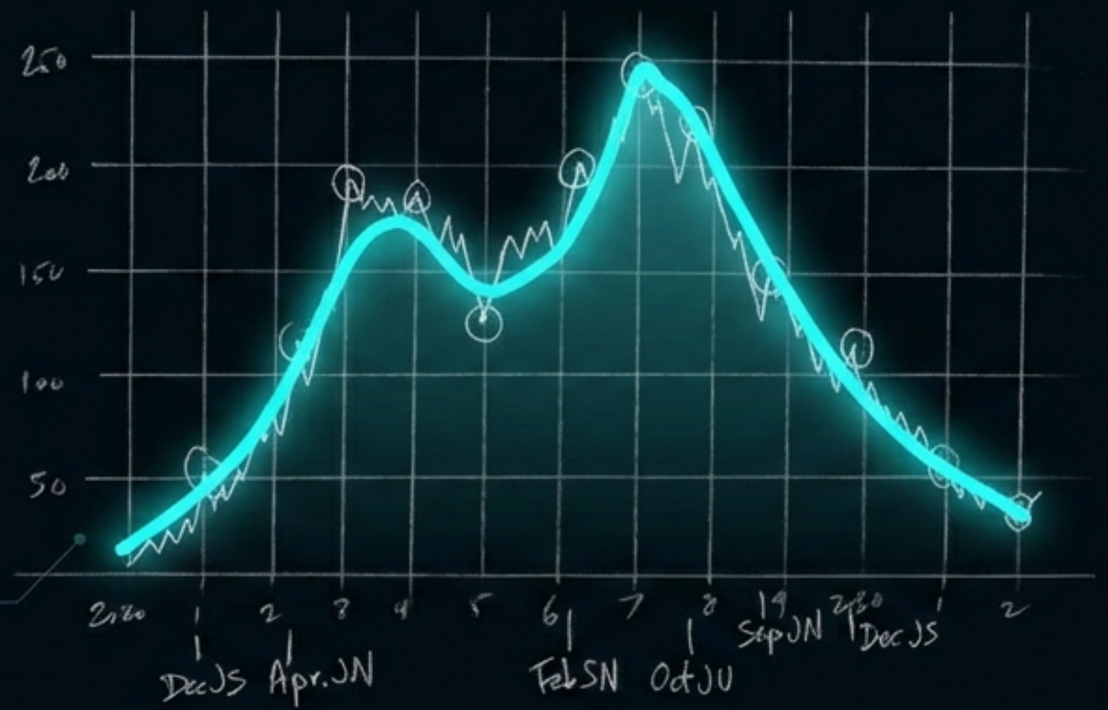
The Saturn-Neptune Alignment.

A miss here would jeopardize the theory of a "second peak."
The mainstream needed this prediction to fail.

NotebookLM

# VINDICATION

The spike hit. The cycle tracked the planetary alignments perfectly.

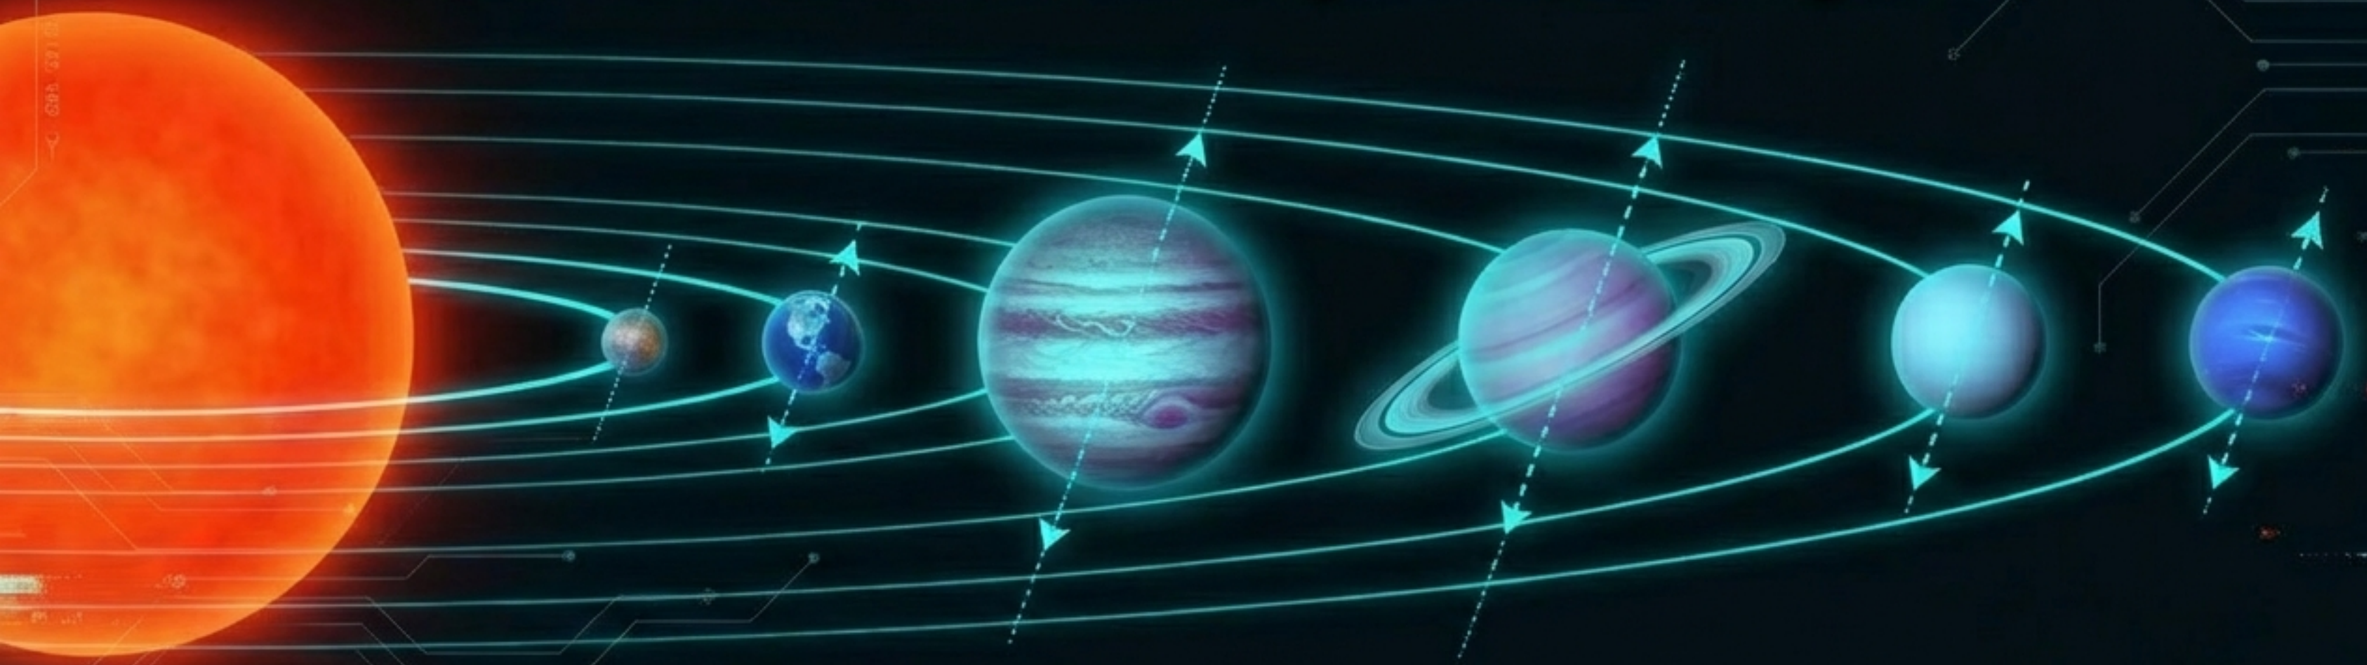


Even with 50% data suppression, the solar activity was too strong to hide.
The theory is proven by the timing of the conjunctions.

NotebookLM

# REWRITING HISTORY

The Unified Field doesn't just solve Solar Cycles.



- The Bode Problem: Explaining planetary spacing via charge fields.
- Planetary Tilt: Caused by EM influence, not random asteroid collisions.

NotebookLM

# PREDICTING THE UNPREDICTABLE

Space Weather drives Terrestrial Weather.

FUTURE CAPABILITY:

By tracking planetary alignments, we can predict droughts, floods, and volcanic eruptions years in advance—a feat impossible under the ‘gravity-only’ model.

NotebookLM

WARNING

# THE BLACK KNIGHT

The mainstream is defeated, lying in a pool of their own errors, yet they claim nothing has changed.

## Read the papers the algorithms hide.

## The biggest news in science isn't on the news—it's right here.
